DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- **Naming Conventions**: clear naming conventions make your code more readable and understandable. The following rules promote clean code and reduces the need for comments:
    1. Avoid single letter names.
    2. Use camelCase when naming objects, functions, and instances.
    3. Do not use trailing or leading underscores.
- **Comparison Operators & Equality:** The use of strict (=== & !==) comparisons considers both the value and the data type which helps avoid coercion issues.
- **Variables:** Always make use of const and let, instead of var. This is in line with best practices and prevents the pollution of the global namespace.

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- **Comments:** I am used to using JSDOCS commenting methods, so I am not used to multi-line comments and do not see why it is necessary if the JSDOCS commenting does the same thing.
- **Arrays:** I am not familiar with array spreads (…)
- **Classes & constructors:** I am not yet familiar with classes as I would like to be.
